BUKAN ZACK D. FILMS

How I Use Claude Code for Video Editing and Animation (Full Workflow)

Studi mendalam video Tensaikun — hook, naskah, shot, palet terukur, dan paket Higgsfield orisinil.

Tensaikun	41.261	1.082	10:17
CHANNEL · 1.770 PENGIKUT	TAYANG · 11 NOV 2026	SUKA · 80 KOMENTAR	16:9 · 1080P60 · 1.952 KATA

Unggah 9 November 2026 · Diukur 11 November 2026, Waktu Indonesia Barat (WIB, UTC+7)
youtube.com/watch?v=-x6ZjVTK8aI · @tensaikunai · UC2H3Gduj-QwWQDxi2IsEjyg

01 Bukan Zack D. Films — ini tutorial 16:9 Tensaikun, 10:17, faceless.

02 Hook 0–3 dtk = bukti tipografi ("written as code"), bukan intro merek.

03 Inti: skill dalam angka, review sebelum render, perbaiki sistem, mulai 2D.

04 Palet mereknya hitam + lime + starburst — jangan dijiplak ke channel kita.

05 41.261 tayang / 1.770 pengikut dalam ±2 hari; suka ≈2,62% (fakta, bukan kausal).

06 Untuk kita: padatkan cara berpikir ini ke Shorts 9:16 (paket e-ink di dalam).

Isi dan catatan legal

1. Siapa yang membuat video ini
2. Unduhan, metadata, transkrip
3. Hook 0–3 detik
4. DNA naskah
5. Lengkung cerita
6. Tabel scene-by-scene
7. Gaya visual & palet hex
8. Audio, SFX, musik
9. Statistik pacing
10. Mengapa performanya kuat
11. Banding formula Zack D. Films
12. Cara meniru untuk channel kita
13. Paket prompt Higgsfield orisinil 9:16
14. Contact sheet & metodologi

Catatan legal. Meniru struktur, ritme, dan pendekatan visual diperbolehkan sebagai pembelajaran gaya. Jangan mengunggah ulang klip Tensaikun, menyalin naskahnya kata-demi-kata, menjiplak adegan atau karakter film Hiroshima-nya (trem 651, Foreman Mori, ruang contoh, dll.), mereproduksi antarmuka Video Hub, atau memakai logo, starburst, dan watermark miliknya. Jangan juga menjiplak naskah, karakter, atau watermark Zack D. Films. Paket prompt di bab 13 adalah karya orisinil untuk topik baru (e-ink). Inferensi ditandai *perkiraan*. Angka tayang/suka bisa berubah.

1. Siapa yang membuat video ini

Ini **bukan** Zack D. Films, dan bukan Shorts 9:16. Ini tutorial long-form 16:9, faceless, dari channel **Tensaikun** (@tensaikunai, ID `UC2H3Gduj-QwWQDxi2IsEjyg`), kategori People & Blogs.

Fakta (11 Nov 2026 WIB)	Nilai
Judul	How I Use Claude Code for Video Editing and Animation (Full Workflow)
Pengikut / tayang / suka / komentar	1.770 · 41.261 · 1.082 · 80
Unggah / usia saat diukur	9 November 2026 · ±2 hari
Durasi / resolusi	617,163 dtk (10:17,16) · 1920×1080 · 60 fps · AV1+AAC · 86 MB
Suka / tayang	≈ 2,62%
Tayang / pengikut	≈ 23,3× (fakta awal, bukan bukti kausal)
Subtitle	Tidak ada yang manual. Auto Inggris (en-orig, en) berhasil. Auto Indonesia gagal HTTP 429.

Pembicara memakai orang pertama (“my Hiroshima film”, “Video Hub yang saya buat”) dan merinci alat: Claude Code + Opus 5.5, Node.js, FFmpeg, Python, Whisper, ElevenLabs, Fish Audio, Cartesia, Google TTS, Microsoft Playground, Google Flow. Thumbnail resmi adalah triptych: matahari + tangan biru + starburst oranye; jamur nuklir; model 3D kubah/bangunan; teks putih besar “Claude”.

2. Unduhan, metadata, transkrip

Berkas kerja ada di `/workspace/zacd/video_x6Z/`. Alat: yt-dlp 2026.10.26, ffmpeg 7.1.5. Percobaan pertama batal karena HTTP 429 pada auto-sub bahasa Indonesia. Percobaan kedua (jeda ±8 dtk, tanpa sub `id`) berhasil meraih 1080p60; cookie tidak dipakai. Ada peringatan tidak ada JS runtime (deno); 1080p tetap didapat.

Metrik transkrip	Angka
Sumber	Auto-caption YouTube, cue rolling, direkonstruksi (bukan subtitle manual)
Jumlah kata	**1.952** (`transcript_clean.txt`)
WPM	**189,8** — lebih cepat dari kisaran Zack ±140–170
Baris berstempel waktu	93 (lihat Analisa .md lampiran A)
Penanda `[music]`	54 kali, di 47 baris
Artifact auto-sub	“Cartesian” = Cartesia di deskripsi resmi; “3D problem s”

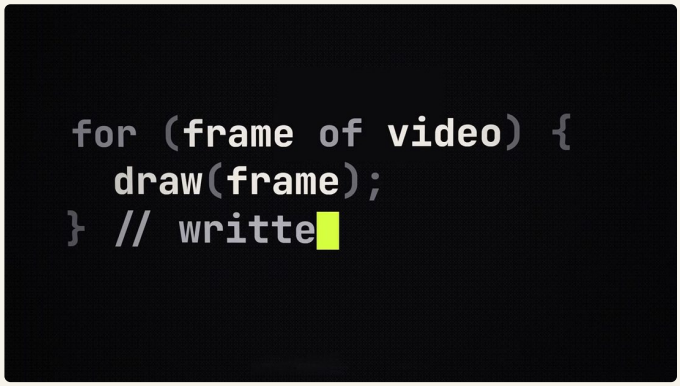

Bab resmi di deskripsi: 0:00 What Claude Code made · 0:42 Setup · 1:43 Script · 2:45 Voice · 3:29 Style · 6:04 Fix · 8:15 Render · 9:15 Upload.

> Every frame you're about to see was written as code. A documentary about Hiroshima, a video about changing your body's settings. No animation software, no stock footage, no image generator. I didn't make any of these. Claude Code did.

Penutup: "Do that three or four times and you'll have style that's yours and nobody else's stick figures. And if you want to see how the next one gets made, subscribe."

3. Hook 0–3 detik — mengapa berhasil

Teramati: 0:00–0:03 adalah lapangan hitam (`#070707–#0B0B0D`) dengan tipografi monospasi seperti kode. Kata kunci putih, sisa abu-abu, kursor kotak lime (`#D6FD41 / #D4FF3E`) mengetik komentar menjadi "written." Tidak ada wajah, logo channel, atau CTA. Auto-sub mulai ±1,79 dtk: *Every frame you're about to see was written as code.*

0:02 — hook tipografi kode + kursor lime

0:04 — bukti: CRT krem, depo trem 3D di 'hutan' voxel

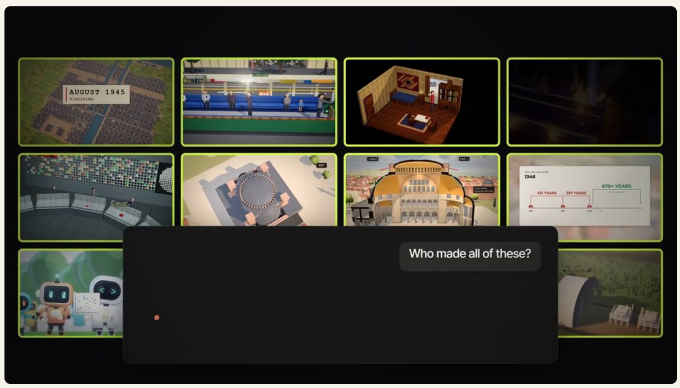

±0:08 — NO + ANIMATION SOFTWARE, huruf 3D #CF3D25

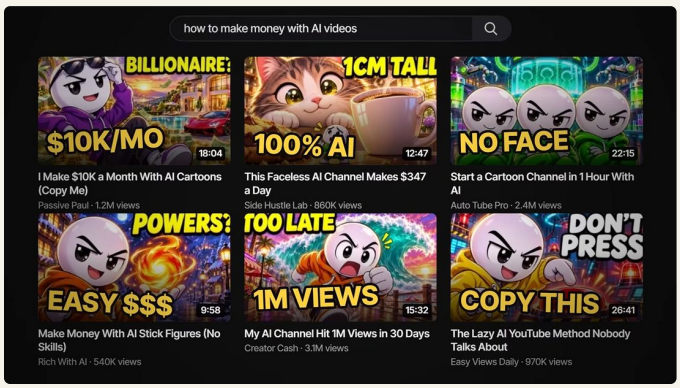

±0:11 — NO IMAGE GENERATOR, lantai ubin gelap

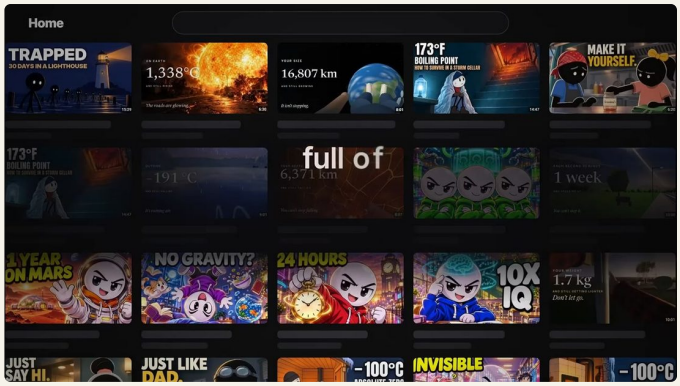

Mengapa bekerja (perkiraan, bukan data retensi YouTube). Bukti dulu, janji belakangan — hook tidak bilang "hari ini saya mengajar workflow," ia *menunjukkan* tesis (frame = kode). Kalimat pertama bisa diuji. Tipografi bersih sudah kontras dengan "AI slop" sebelum parodi thumbnail masuk di detik 16–25. Tidak ada intro merek. Ini selaras semangat hook Zack (masuk langsung) meski bentuk visualnya berbeda.

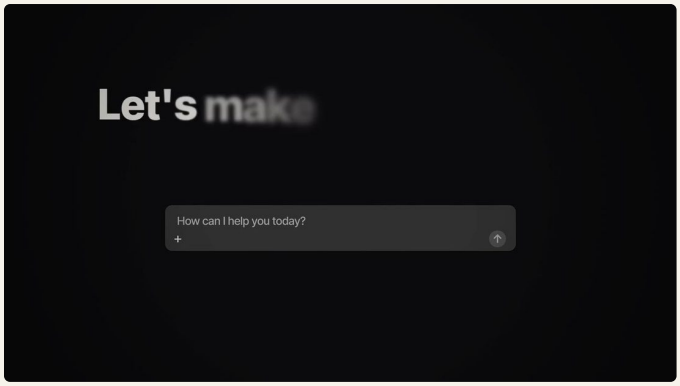

±0:13 — grid film contoh + "Who made all of these?"

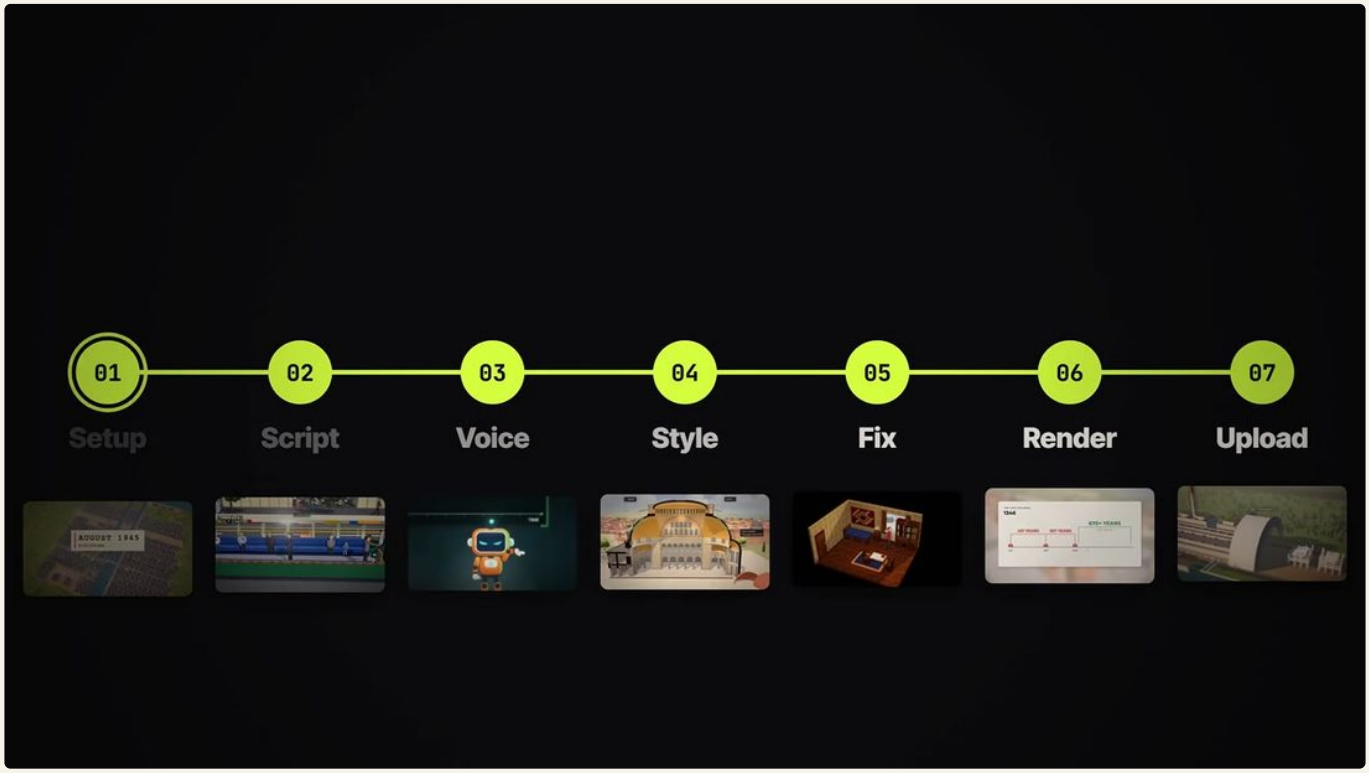

±0:16 — parodi hasil pencarian 'how to make money with AI videos'

±0:25 — grid Home + overlay ‘full of’

±0:31 — ‘Let's make’ + kotak prompt Claude

0:42 — kontrak bab: timeline lime 01 Setup – 07 Upload

4. DNA naskah

Bahasa Inggris, orang pertama, nada guru padat, hampir tanpa candaan, satu narator. Ada CTA subscribe (berbeda dari Zack). Pola yang berulang: **klaim pendek → bukti atau akibat → pembalikan**. Sering tricolon dan angka konkret. Jangan menyalin kalimatnya; pinjam fungsinya.

Blok	Fungsi DNA
0:00–0:18 Bukti	Klaim absolut + dua contoh hasil + tiga “NO” + atribusi “Claude Code did.”
0:18–0:26 Musuh	Guru YouTube, mimpi pasif, akibat: AI slop.
0:26–0:42 Tesis + kontrak	Bukan karena Claude tidak bisa — “nobody tells it how.” Janji: satu scene 20 dtk, folder kosong sampai video jadi, “prompts I actually use.”
0:42–1:43 Setup	Turunkan takut biaya (hanya Claude plan berbayar), instalasi dibantu, pilih Opus 5.5, struktur folder. *Teramati:* satu frame UI menampilkan Sonnet 5.5, berbeda dari VO.
1:43–2:45 Script	“If the script is bad, no visual can save it.” Mulai dari kata. Dua opsi (satu prompt vs scene-by-scene). Baris “what the camera sees.” Baca keras, potong yang seperti buku teks.
2:45–3:29 Voice	TTS vs kloning suara. Berbayar: ElevenLabs, Fish Audio, Cartesia. Gratis: Google TTS, Microsoft Playground. Whisper untuk word-timing; boleh minta jeda dan re-time.

3:29–6:04 Style (inti)	Claude tidak punya gaya; tanpa arah → stick figure. Perbaikan bukan prompt yang lebih pintar, melainkan **skill**. Bisnis/merek, bukan lotre. Prompt = what, skill = how. Gaya dalam **angka, bukan kata sifat**. Mulai 2D. SFX kode cenderung terlalu keras dan seragam.
6:04–8:15 Fix	Langkah yang "almost everyone skips." Live preview, bukan render berulang. 152 catatan; jika berulang, perbaiki skill. 10 rounds of rules. Sesi baru per video.
8:15–9:15 Render	Render setelah live benar. Chrome → FFmpeg. Pecah chunk. Edit list bisa memindahkan momen terpenting ke awal tanpa membangun ulang scene (ia memindahkan "the flash" ke 0:00).
9:15–10:17 Upload	Judul, deskripsi, chapters. Thumbnail "more about you." Film = kode; thumbnail = satu tempat image model. "You stay the director." Tes 20 dtk, perbaiki skill. Subscribe.

5. Lengkung cerita

1. **Hook / bukti** (0:00–0:18) — tunjukkan hasil, klaim semua ini kode.
2. **Musuh / masalah** (0:18–0:26) — guru, mimpi pasif, slop.
3. **Tesis** (0:26–0:42) — beri tahu Claude *how*; ikut satu scene 20 dtk.
4. **Jalan berbab** (0:42–9:15) — tujuh kartu lime "STEP n / 07."
5. **Klimaks praktis** di Style + Fix: skill bernomor, 152 catatan, perbaiki sistem.
6. **Payoff produksi** (8:15–9:15) — render efisien, hook-edit.
7. **Closer** (9:15–10:17) — metadata, thumbnail terpisah, sutradara tetap manusia, CTA.

Ini arc **tutorial proses**, bukan arc Shorts Zack (hook → mitos → dive → twist → payoff). Tetapi 40 dtk pembuka sudah memampatkan mini-arc yang mirip: bukti, mitos, pembalikan, janji.

0:43 STEP 01 / 07 Setup.

1:43 STEP 02 / 07 Script.

6:04 STEP 05 / 07 Fix.

6. Tabel scene-by-scene

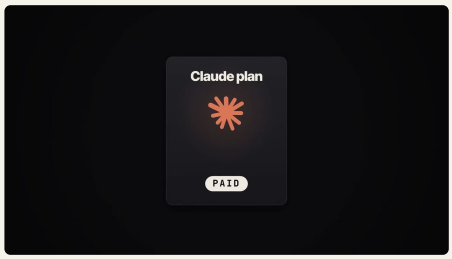

Metodologi cut. FFmpeg scene 0,25 hanya 6 cut; 0,15 hanya 10 — wajar pada motion-graphic gelap. Beda piksel antar frame 1 dtk (ambang ≥38) memberi **77 unit** (rata-rata 8,02 s, median 3,0 s, min 1 s, maks 60 s, 24 unit ≤1,2 s, ≈7,39 cut/menit). Ini *perkiraan batas bawah*. Hold 60 s di Setup dan 58 s di Render hampir pasti berisi ketukan tipografi yang luput. Tabel disusun dari bab resmi + frame yang dilihat langsung. Sudut/gerak kamera ditandai perkiraan bila tidak tertulis "teramati." Transisi dominan: cut halus atau wipe lingkaran lime. Tidak ada caption karaoke Shorts.

6.1 Hook & janji (0:00–0:42)

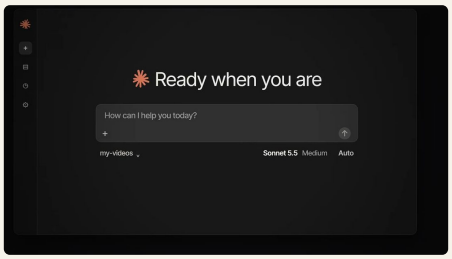

Waktu	VO ringkas	Visual / shot	Transisi / teks
0:00–0:04	Every frame… written as code.	Kode monospasi, kursor lime, MS frontal, statis (ketik).	Muncul dari hitam. Teks: for (frame of video)…
0:04–0:07	A documentary about Hiroshima…	CRT krem di voxel abu/lime; depo trem di layar. WS+MS, sudut sedikit rendah; gerak dolly *perkiraan*.	Cut. Tidak ada subtitle di dalam insert.
0:07–0:12	No animation software / stock / image generator.	Huruf 3D NO oranye-merah, pecahan kubus, low angle; push/orbit *perkiraan*.	Morph kata kanan. NO + IMAGE GENERATOR.
0:12–0:16	I didn't make any of these. Claude Code did.	Grid mini-film berbingkai lime + overlay chat. Flat, frontal.	Cut. "Who made all of these?"
0:16–0:31	Gurus… AI slop.	Parodi pencarian & Home YouTube, thumbnail kartun slop. Flat UI.	Cut / overlay "full of".

0:31–0:42	Nobody tells it how… let's start with the setup.	“Let's make” (huruf blur) + prompt; lalu timeline 01–07.	Cut, ke timeline lime.

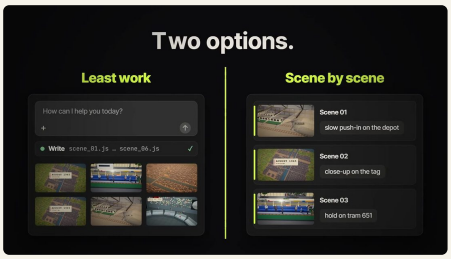

6.2 Setup → Script → Voice

±0:54 kartu Claude plan + starburst #CE7256 + PAID

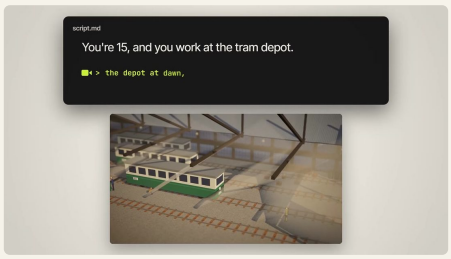

±1:20 ‘Ready when you are’ — UI menampilkan Sonnet 5.5

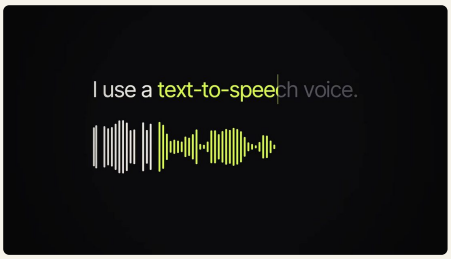

±2:10 Two options: least work vs scene by scene

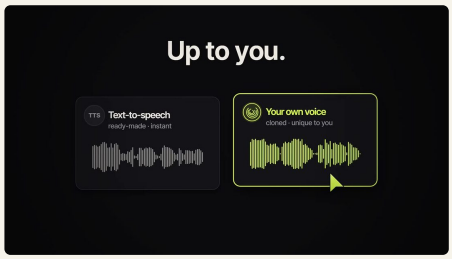

Kartu script.md di atas kertas #D5D2C9

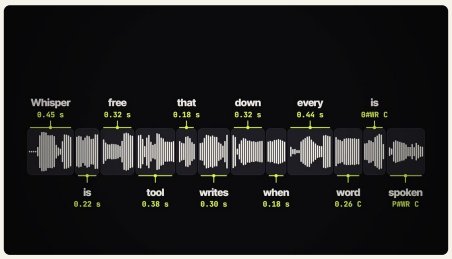

Skrip + insert depo: ‘You're 15… the depot at dawn’

Karaoke ‘text-to-speech’ + waveform lime/putih

Up to you — TTS vs your own voice

Whisper: tiap kata + durasi detik

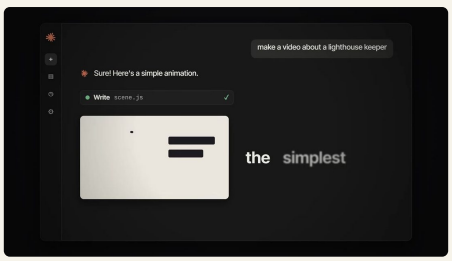

Minta jeda +1,5 s setelah flash

Waktu	VO / visual ringkas
0:43	Kartu lime penuh STEP 01/07 “Setup.” Huruf akhir sempat motion-blur, 7 titik.
0:48–1:20	Folder + kartu plan berbayar; UI Claude. VO: pilih Opus 5.5 (frame 1:20 masih Sonnet 5.5).
1:43	Kartu “Script.” Tesis: naskah buruk tidak terselamatkan visual.
±2:05–2:45	Dua opsi kerja; praktik “camera sees”; insert 3D depo high angle; “then move on.”
2:45–3:29	Wipe “Voice.” Waveform, pilihan suara, Whisper timing, re-time jeda 1,5 s.

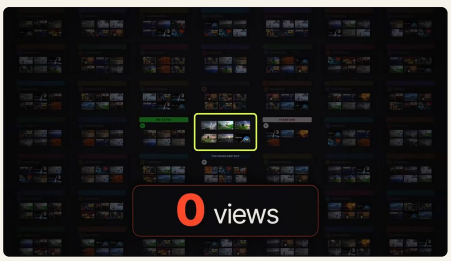

6.3 Style (3:29–6:04) — inti

3:29 wipe lingkaran lime STEP 04/07

Tanpa arah: hasil ‘the simplest’ stick figure mercusuar

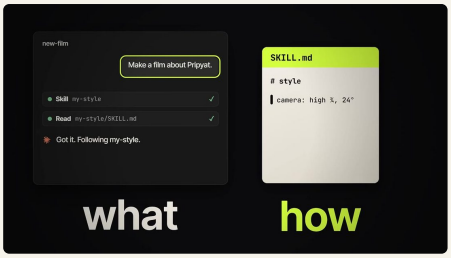

Dinding copycat + ‘0 views’ #F3482B

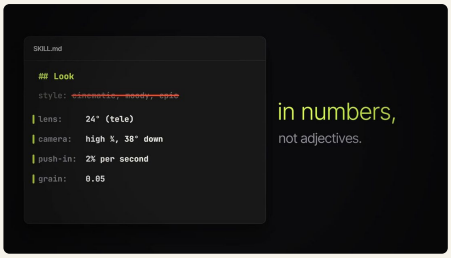

a business. a brand. not a lottery ticket. Tiket #F2C83C

A skill is a folder — my-style / SKILL.md

Prompt = what, skill = how (contoh angka 24°)

‘cinematic, moody, epic’ dicoret — ganti angka

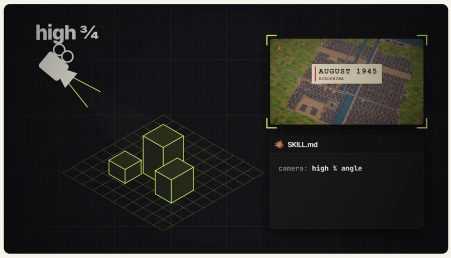

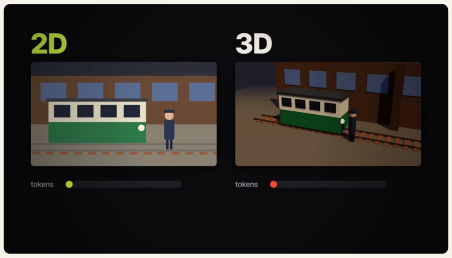

Diagram high ¾ + inset peta AUGUST 1945

Depo ¾: trem 651, tag piksel MORI · FOREMAN

Insert ruang 3D + kata lime ‘originality’

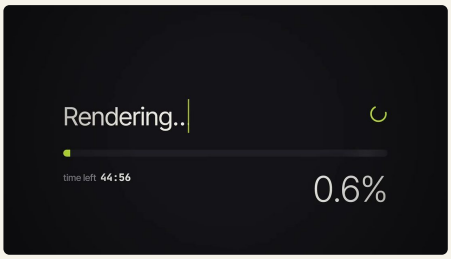

2D vs 3D, meter token hijau vs merah

too loud — enam SFX menembus 0 dB

Waktu	VO / visual	Teks on-screen
3:29–3:44	Circle wipe Style. Tanpa arah → stick figure. “The fix isn't a better prompt. It's a skill.”	the simplest / SKILL.md
3:50–4:10	Satu channel juta views, copycat “0 views.” “Not a lottery ticket.”	0 views / a business. a brand.
4:10–4:38	Skill = folder. What vs how. Referensi Pinterest; copy YouTube “I wouldn't recommend.”	what / how / Saved
4:38–5:20	Originality. Gaya dalam angka (24°, 38° down, push 2%/s, grain 0.05). Diagram kamera.	in numbers, not adjectives / high ¾
5:20–6:04	Show don't tell, name tag piksel. Mulai 2D. SFX kode terlalu keras; boleh pakai file sendiri.	MORI · FOREMAN / 2D 3D / too loud

6.4 Fix → Render → Upload

Rendering 0,6% — sisa 44:56 (alasan hindari render berulang)

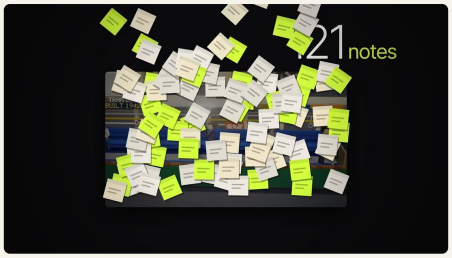

10 pie lime: metafora 10× render ≈ 7,5 jam

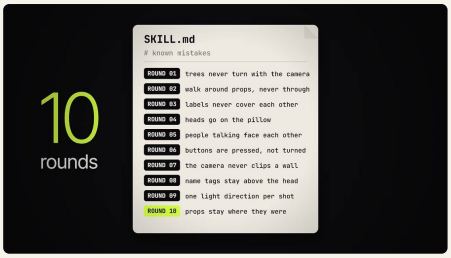

UI review (merek Video Hub milik pembuat — jangan ditiru)

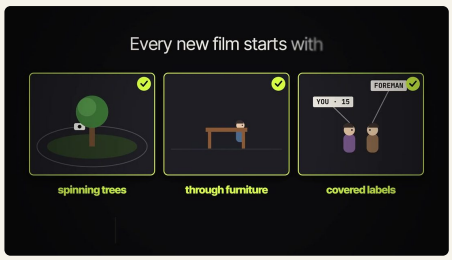

Catatan #115 'He's facing' di atas tag yang menutupi

Hujan sticky; angka 121 notes menuju klaim 152

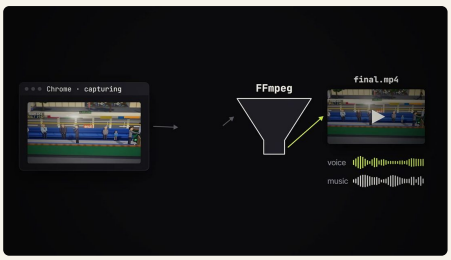

SKILL.md — 10 rounds of rules / known mistakes

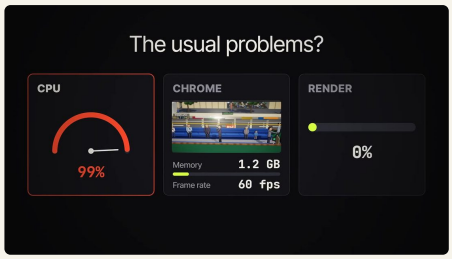

Bug 3D yang sudah 'solved': pohon, furniture, label

Ilustrasi clip: figur menembus meja (alasan mulai 2D)

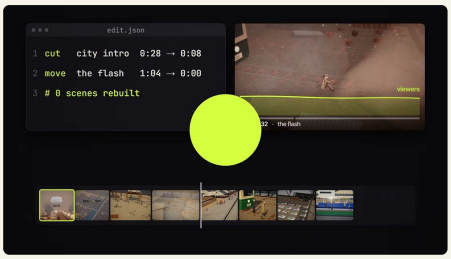

Chrome capturing → FFmpeg → final.mp4 + voice/music

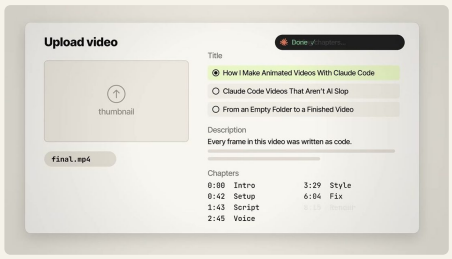

The usual problems? CPU 99% / Chrome 1,2 GB 60 fps

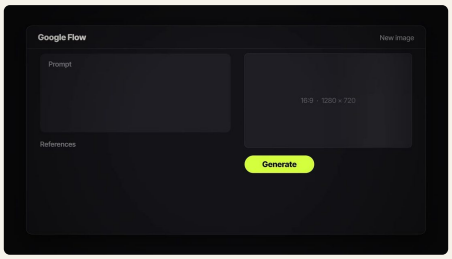

Render dipecah c_001–c_008

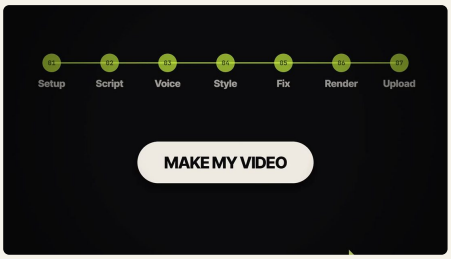

edit.json: move the flash 1:04 → 0:00, 0 scenes rebuilt

Form unggah: 3 opsi judul + chapters + final.mp4

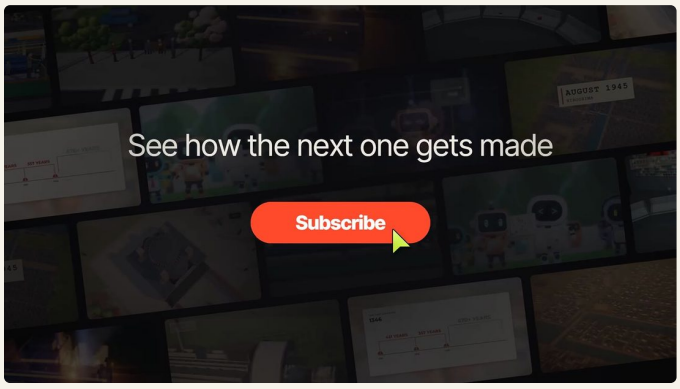

Google Flow skematik — thumbnail = satu tempat image model

MAKE MY VIDEO — justru ditegaskan bukan cara push-button

10:10 — a style that's yours.

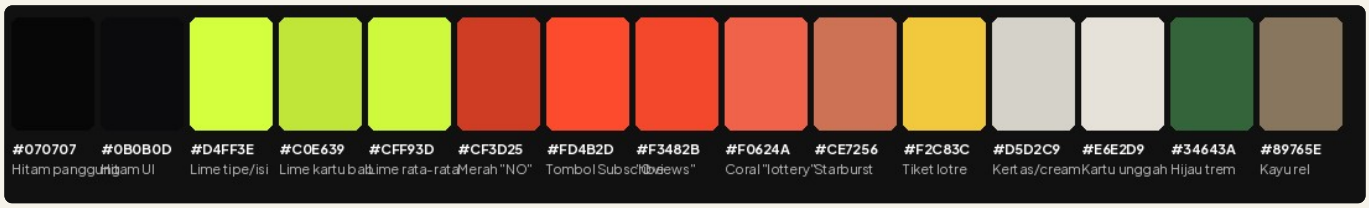

10:13–10:17 end card Subscribe #FD4B2D (Zack: tanpa CTA)

7. Gaya visual & palet

Look: motion-graphic / tipografi dokumenter di panggung hitam, diselingi kartu bab lime selembar, UI skematik gelap atau cream, dan insert 3D low-poly. Bukan fotoreal, bukan stiker slop, bukan stylized-realistic cyan Zack. 16:9, 60 fps, faceless.

Cahaya: kartu tipografi rata + vignette, huruf kadang motion-blur. Insert depo: matahari pagi keras, bayangan geometris. **Caption:** bukan karaoke bawah; informasi dibawa tipografi desain. Film contoh memakai pixel name tag, bukan subtitle.

Motif merek Tensaikun (jangan dipakai untuk channel kita): starburst 8 cabang oranye, lime asam, kartu STEP n/07, kursor lime.

Palet diukur PIL dari frame kunci (median atau rata-rata piksel). Bukan brand guide resmi.

Hex	Peran	Sumber
`#070707` / `#0B0B0D`	Hitam panggung / UI	t0, banyak kartu
`#D4FF3E` / `#C0E639`	Lime tipe, lingkaran, kartu bab	Style wipe, Setup/Script
`#CF3D25` / `#FD4B2D` / `#F3482B`	NO 3D, Subscribe, "0 views"	0:08, 10:15, 4:00
`#F0624A` / `#CE7256` / `#F2C83C`	Coral lottery, starburst, tiket	4:07, 0:54
`#D5D2C9` / `#E6E2D9`	Kertas / form unggah	script.md, 9:18
`#34643A` / `#89765E`	Badan trem / kayu rel	depo 5:25

8. Audio, SFX, musik

Metrik ffmpeg	Hasil
Integrated loudness	**−14,1 LUFS** (dekat target streaming −14)
LRA	**2,9 LU** (sangat sempit — level konsisten)
LRA low–high	−15,8 hingga −12,9 LUFS
True peak / max_volume	**−0,4 dBFS** (panas)
mean_volume	−17,2 dB
silencedetect −35 dB, ≥0,6 s	**0** jeda hening
`[music]` auto-sub	54 kali / 47 baris

Perkiraan: ada bed music hampir terus-menerus di bawah VO, plus SFX transisi. Genre lagu tidak diidentifikasi. Apakah bed buatan kode atau file luar *tidak dapat dipastikan* dari berkas saja. VO memperingatkan SFX buatan Claude "too loud" dan seragam, lalu menunjukkan file sendiri (`my_score.wav`, dll.). Tidak ada talking-head.

9. Statistik pacing

Bab	Durasi	Unit beda-piksel	Rata-rata	Hold maks
Hook 0:00–0:42	42 s	10	4,2 s	16 s
Setup 0:42–1:43	61 s	3	20,7 s	60 s (under-count)
Script 1:43–2:45	62 s	10	6,1 s	20 s
Voice 2:45–3:29	44 s	4	11,0 s	36 s
Style 3:29–6:04	155 s	24	6,5 s	47 s
Fix 6:04–8:15	131 s	21	6,2 s	37 s
Render 8:15–9:15	60 s	2	30,0 s	58 s (under-count)
Upload 9:15–10:17	62 s	3	20,7 s	44 s

Bacaan kualitatif (lebih andal daripada hold 60 s): hook 0–25 dtk berganti 1–2 dtk; kartu bab ±2–4 dtk; diagram/UI sering ditahan sambil elemen bergerak di tempat. Ini pacing "slide dokumenter yang hidup," bukan cut 2–3 dtk ala Shorts Zack. WPM 189,8 menjaga kepadatan.

10. Mengapa performanya kuat

Fakta: 41.261 tayang, 1.082 suka (≈2,62%), 80 komentar, 1.770 pengikut, ±2 hari. Judul spesifik "Full Workflow." Thumbnail kontras tiga dunia + kata "Claude" raksasa. Deskripsi berisi chapters dan daftar alat. Hook meraih bukti sebelum mengajar. Ada CTA.

Perkiraan, bukan kausal: topik menunggang gelombang Claude Code / AI slop / faceless (tercermin di tag); posisi anti-slop sambil tetap memakai AI; struktur "satu scene 20 dtk dari folder kosong" menurunkan overwhelm; angka konkret (152, 10 rounds, 24°, 4 jam) terasa berpengalaman; video itu sendiri adalah bukti klaim "every frame is code." Tidak ada data retensi, CTR, atau sumber traffic.

11. Banding formula Zack D. Films

Sumber: `/workspace/zacd/final/DNA_ZacD_FINAL.md` (11 Nov 2026).

Dimensi	Tensaikun, video ini	Formula Zack
Format	Tutorial 10:17, 16:9, faceless	Shorts ±28–35 dtk, 9:16
Naskah	1.952 kata, 189,8 wpm, ada CTA	75–95 kata, ±140–170 wpm, tanpa CTA
Hook	Bukti tipografi "written as code"	Sering If/When you X… but, atau in medias res
Arc	Bukti → slop → skill → 7 langkah → subscribe	Hook → mitos → dive → twist → payoff
Visual	Hitam + lime, UI, 3D low-poly	3D stylized-realistic, cyan #4DC0FF
Caption	Tipografi desain	Karaoke putih 2–5 kata
Cut	Hold + morph; hook 1–2 s	Ganti shot ±2–3 s
Klaim produksi	Setiap frame = kode	Blender + animator manusia, bukan AI

Praktis: ini bukan templat visual Zack. Ini templat proses dan tipografi dokumenter. Untuk channel kita (Shorts 9:16, satu fakta, ±30 dtk), pindahkan *cara berpikir* — hook bukti, skill bernomor, review sebelum boros kredit, mulai sederhana, pindahkan momen terkuat ke detik 0 — lalu padatkan ke format Shorts. Jangan meniru lime + starburst, dan jangan menjadikan tutorial 10 menit sebagai format utama.

12. Cara meniru untuk channel kita

> **Dua jalur.** A (disarankan): Shorts inti, 75–95 kata, ±30 dtk, 9:16, selaras DNA Zack + anggaran Higgsfield Max 3.6K — pakai cara hook dan kejelasan Tensaikun, bukan durasinya. B: sesekali behind-the-formula 16:9, hanya jika ingin format kedua, tanpa meniru merek atau contoh Hiroshima.

1. Pilih satu janji yang bisa *dilihat* di frame pertama.
2. Tulis naskah dulu. Naskah lemah tidak terselamatkan visual.
3. Hook 0–3 dtk = bukti, bukan intro merek. Pindahkan momen terkuat ke awal.
4. Satu kalimat mitos, lalu pembalikan "bukan karena X, tapi Y."
5. Satu contoh yang diikuti sampai selesai.
6. Tulis skill merek **dalam angka, bukan kata sifat** (lensa, sudut, push %/s, grain, palet hex, larangan). Perbaiki file ini setiap catatan review berulang.
7. Review sebelum menghabiskan kredit Higgsfield.
8. Mulai sederhana (2D atau satu objek 3D bersih).
9. Thumbnail dan judul adalah pekerjaan terpisah.

10. Tetap jadi sutradara. Untuk jalur Zack-like: tanpa CTA subscribe, kecuali kita sadar menyimpang.

Jangan kloning palet: paket Tensaikun (hitam + lime `#D4FF3E` + starburst + STEP n/07) atau paket Zack (cyan `#4DC0FF` + body medis yang sama + watermark). Pilih aksen ketiga yang konsisten — contoh paket e-ink di bab 13: gading + tinta + kobalt.

13. Paket Higgsfield orisinil 9:16 — Why E-Ink Doesn't Need Power To Hold A Picture

Topik berbeda: fisika e-ink (pigmen bistabil). Bukan tutorial Claude, bukan Hiroshima, bukan tubuh medis. Tidak ada host. Benda: reader e-ink, papan iklan, kapsul pigmen — desain orisinil. ±32 dtk, 10 shot, VO 88 kata ≈ 165 wpm.

> This picture is still on the screen. The battery is at zero. Most people think a display has to keep drawing power or the image vanishes. An e-ink panel doesn't paint with light. It packs millions of tiny capsules, each holding black and white pigment. A short voltage pulse flips the particles. Then the power can stop. The pigment just sits there, like ink on paper. That's why a reader can hold a page for weeks, and a billboard can keep the ad after the sun goes down.

Style bible (prefix, tempel di setiap start-frame)

```
STYLE BIBLE (use on every shot, 9:16 vertical):
Stylized educational motion-graphics, tactile and physical, not photoreal, not sticker-cartoon, not medical illustration.
Paper-ivory backdrop or stage #F3EDE0; deep ink black #1A1916; accent electric cobalt #2F6BFF; warm graphite #4A4741; dry-clay #C4A484 for warm props only.
Soft studio light from upper left, gentle contact shadows, faint paper-grain 0.04, no heavy bloom, no neon lime, no cyan sky cyclorama, no 8-point orange starburst logo, no YouTube UI parody, no channel watermarks, no readable third-party trademarks.
Typography: high-contrast ink or ivory, grotesque sans, one keyword at a time, centered or lower-third, never karaoke-captions that copy another channel, never lime (#D4FF3E) titles.
Camera: locked or slow 1.5% per second push-in unless the shot says otherwise; 35mm-equivalent, slight high angle (15°) on objects; macroscopic inserts for capsules.
Original objects only: matte ivory e-reader with rounded corners and a cobalt pinhole LED; roadside e-ink billboard with a simple geometric bird icon (not a real brand); microcapsules as frosted spheres with black and white pigment discs inside.
```

Shot-by-shot — start frame + motion

Generate start-frame 9:16, lalu motion dari frame itu. Jangan pakai frame video Tensaikun sebagai referensi gambar.

Shot 01 — 0:00–0:03 — Hook. VO: *This picture is still on the screen.*

```
START FRAME
9:16 close-up of a matte ivory e-reader resting on a paper-ivory desk, screen showing a sharp black botanical line drawing of a fern. Cobalt pinhole LED is dark (off). No people. Soft upper-left light, faint grain. Locked camera, 35mm, very slight high angle.

MOTION
Almost still. Micro push-in 1% per second. The fern drawing stays perfectly sharp and unchanging. No flicker, no glow from the screen. 9:16.
```

Shot 02 — 0:03–0:06. VO: *The battery is at zero.*

```
START FRAME
9:16 same e-reader, three-quarter view. A short charcoal power cable has just come out of the USB-C port and hangs slack toward the bottom of frame. On the desk, a small typographic badge in ink black reads "0%" in grotesk sans. Screen still shows the fern. LED off. Paper-ivory background.

MOTION
The unplugged cable settles with a tiny physical swing, then rests. The "0%" badge eases in (do not use lime). Screen image never fades. Slow push-in. 9:16.
```

Shot 03 — 0:06–0:11 — Mitos. VO: *Most people think a display has to keep drawing power or the image vanishes.*

```
START FRAME
9:16 split comparison on ivory stage: LEFT a conventional glossy phone screen with a cobalt-tinted photo of clouds, a thin glowing edge; RIGHT the e-reader with the fern, no glow. Small captions in graphite: "needs power" left, "holds still" right. No logos.

MOTION
Left phone image flickers and starts to fade to black as a tiny battery icon drains. Right e-reader stays constant. Locked camera. 9:16.
```

Shot 04 — 0:11–0:15 — Pembalikan. VO: *An e-ink panel doesn't paint with light.*

```
START FRAME
9:16 typographic-object shot: a cross-section of a thin e-ink stack held like a glass specimen on ink-black stage, layers visible as ivory sheets, no bright backlight layer. Word "LIGHT" in thin typography behind it, crossed out by a cobalt slash. Clean, editorial.

MOTION
A soft light ray tries to enter from the left and is visually rejected (no backlight turns on). Slow 15° orbit right, 2 seconds, then hold. 9:16.
```

Shot 05 — 0:15–0:19. VO: *It packs millions of tiny capsules, each holding black and white pigment.*

```
START FRAME
9:16 macro view, a transparent sheet filled with a grid of frosted spherical microcapsules. Inside each sphere: white pigment discs and black pigment discs, some black-up, some white-up, like seeds in oil. Cobalt rim-light, ivory bokeh background.

MOTION
Slow push-in toward the center capsules. Subtle Brownian drift of discs inside the liquid, very slow, no chaotic sparkle. 9:16.
```

Shot 06 — 0:19–0:23 — Mekanisme. VO: *A short voltage pulse flips the particles.*

```
START FRAME
9:16 diagram-real hybrid: three capsules in a row in side view, top and bottom electrodes as thin graphite bars. Left capsule black discs at bottom, middle mid-flip, right already flipped. A short cobalt lightning-tick at the middle electrode (abstract, not a logo).

MOTION
A single brief cobalt voltage pulse travels across the top electrode. In the middle capsule, black and white discs swap positions in one clean flip (about 0.6s), then freeze. Locked camera. 9:16.
```

Shot 07 — 0:23–0:26. VO: *Then the power can stop.*

```
START FRAME
9:16 the same three-capsule diagram, now all flipped to a stable state. The cobalt pulse is gone. A small typographic line in graphite: "voltage: 0". Quiet, still.

MOTION
The word "0" ticks in. All electrical glow dies. Capsules remain frozen. Very slight camera settle. 9:16.
```

Shot 08 — 0:26–0:29 — Analogi. VO: *The pigment just sits there, like ink on paper.*

```
START FRAME
9:16 top-down: a sheet of ivory paper with wet black ink settling into a fern shape, beside a cutaway e-ink capsule whose black pigment has settled to the visible face, matching the ink shape. Soft daylight, tactile paper fibers visible.

MOTION
Ink on paper finishes absorbing and goes matte; the capsule pigment locks in parallel. No ripples after 0.5s. Slow push-in. 9:16.
```

Shot 09 — 0:29–0:32 — Payoff 1. VO: *That's why a reader can hold a page for weeks,*

```
START FRAME
9:16 a windowsill at a slight high angle, dry-clay plant pot at the edge, ivory e-reader standing, fern page on
screen, a small paper calendar in the background with several days marked, morning light stripe across the desk.
Battery still "0%" as a tiny corner glyph. No people, no brand logos.

MOTION
Time-of-day lighting shifts gently (a moving sun stripe) over 3 seconds while the page on the reader does not
change at all. 9:16.
```

Shot 10 — 0:32–0:36 — Payoff 2. VO: *and a billboard can keep the ad after the sun goes down.*

```
START FRAME
9:16 dusk vertical: an original roadside e-ink billboard (matte, large, not a real advertiser) showing a simple
geometric bird icon in ink black on ivory, city graphite silhouettes, sky after sunset in muted clay and ink, no
neon, no lime. The billboard is not backlit; it stays readable by remaining pigmentation.

MOTION
Ambient light falls another stop; the street is darker; the billboard image stays equally crisp, no internal glow
turning on. Slow 1.5% push-in. Hold the last frame for 0.4s. 9:16.
```

Caption opsional milik kita (bukan karaoke Zack, bukan lime Tensaikun), satu–dua kata tinta per beat: STILL / 0% / NO BACKLIGHT / PIGMENT / PULSE / POWER OFF / LIKE INK / WEEKS.

Judul usulan: *Why E-Ink Doesn't Need Power To Hold A Picture*. Kapasitas: 10 start-frame + 10 motion ≈ 20 generate; siapkan 1–2 percobaan ulang pada shot 05–06. Muat di Max 3.6K jika tidak diboroscoba.

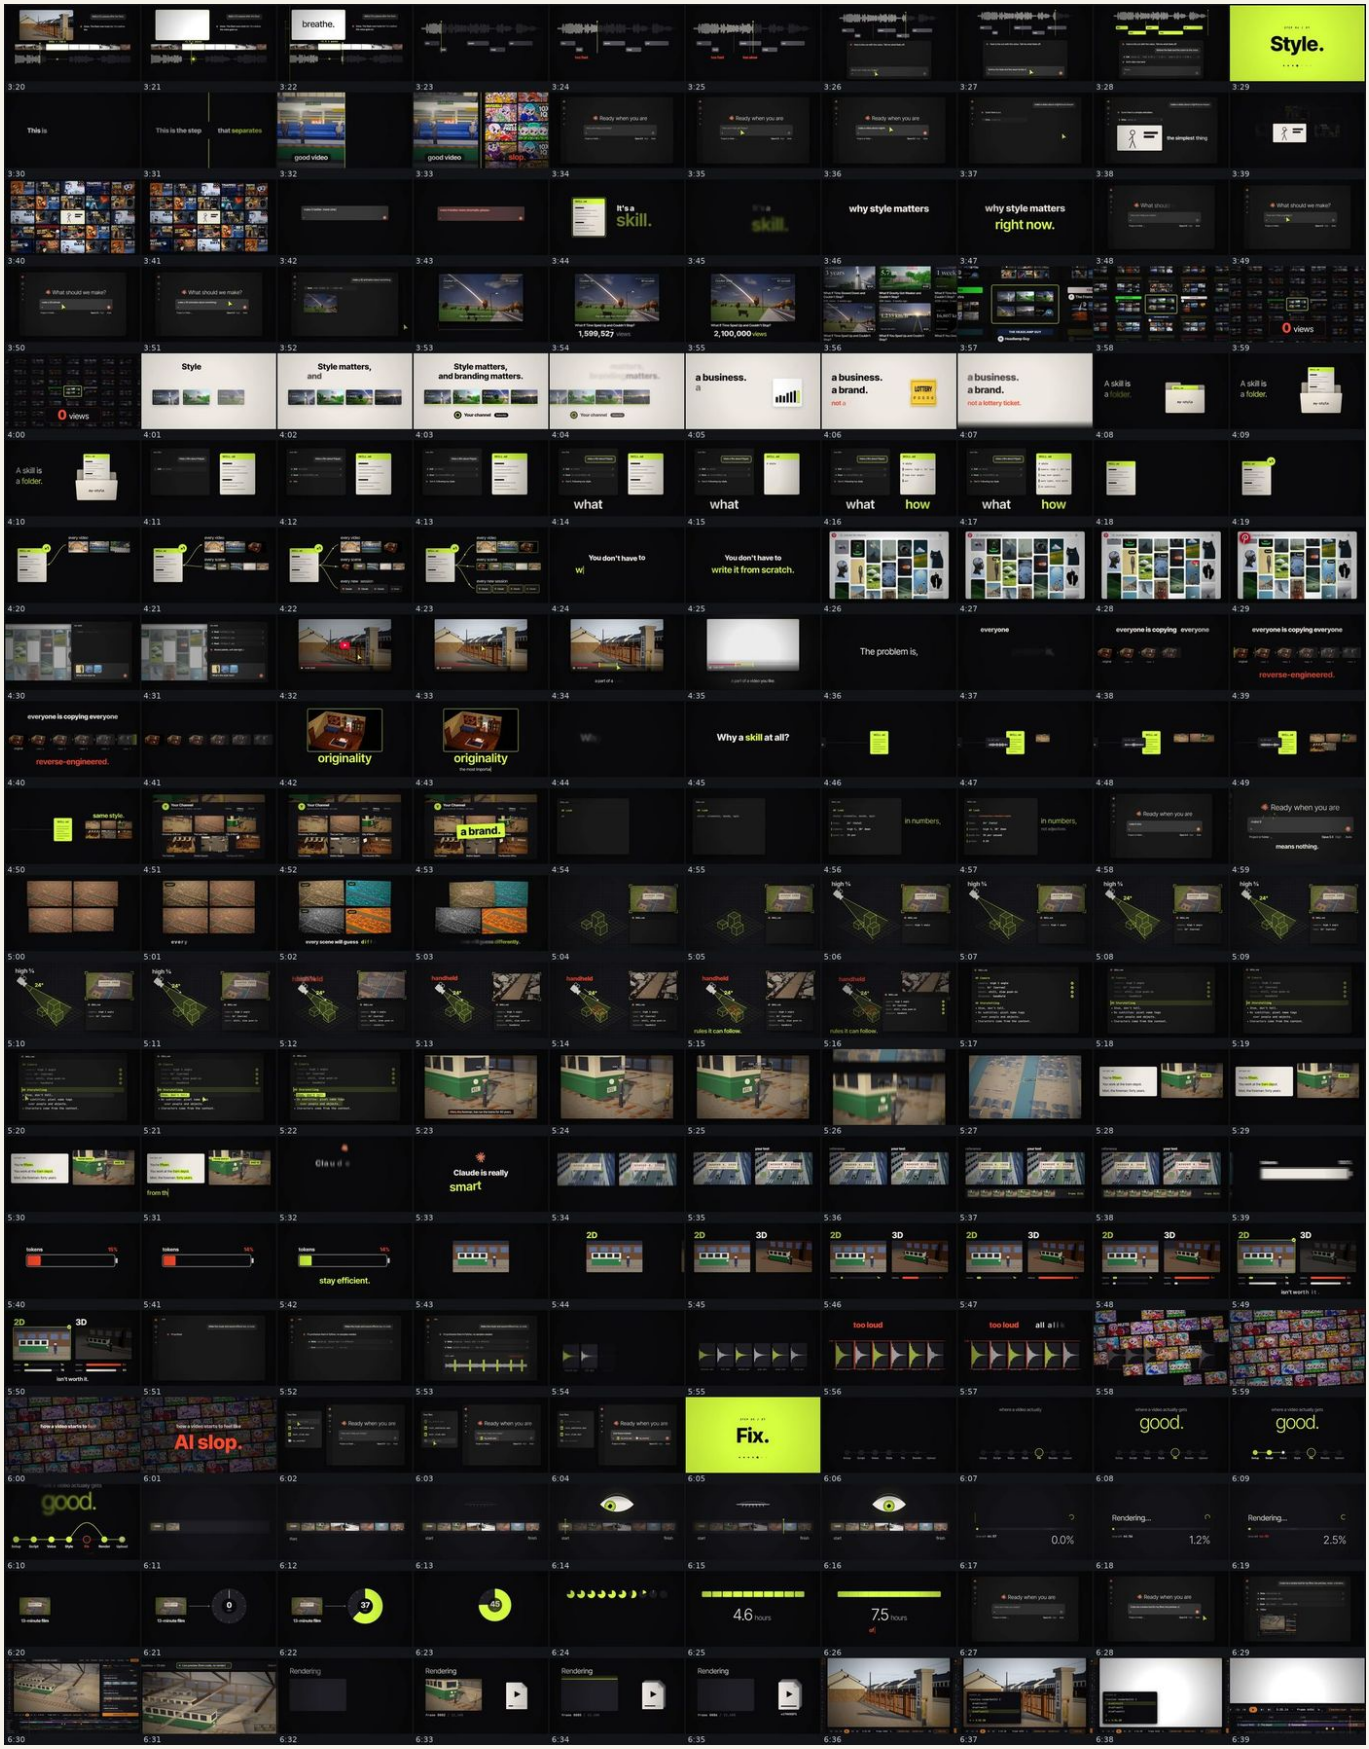

> **Legal, diulang.** Salin gaya dan formula. Jangan menyalin klip, naskah, karakter, logo, atau thumbnail Tensaikun maupun Zack D. Films. Paket ini orisinil.

14. Contact sheet & metodologi

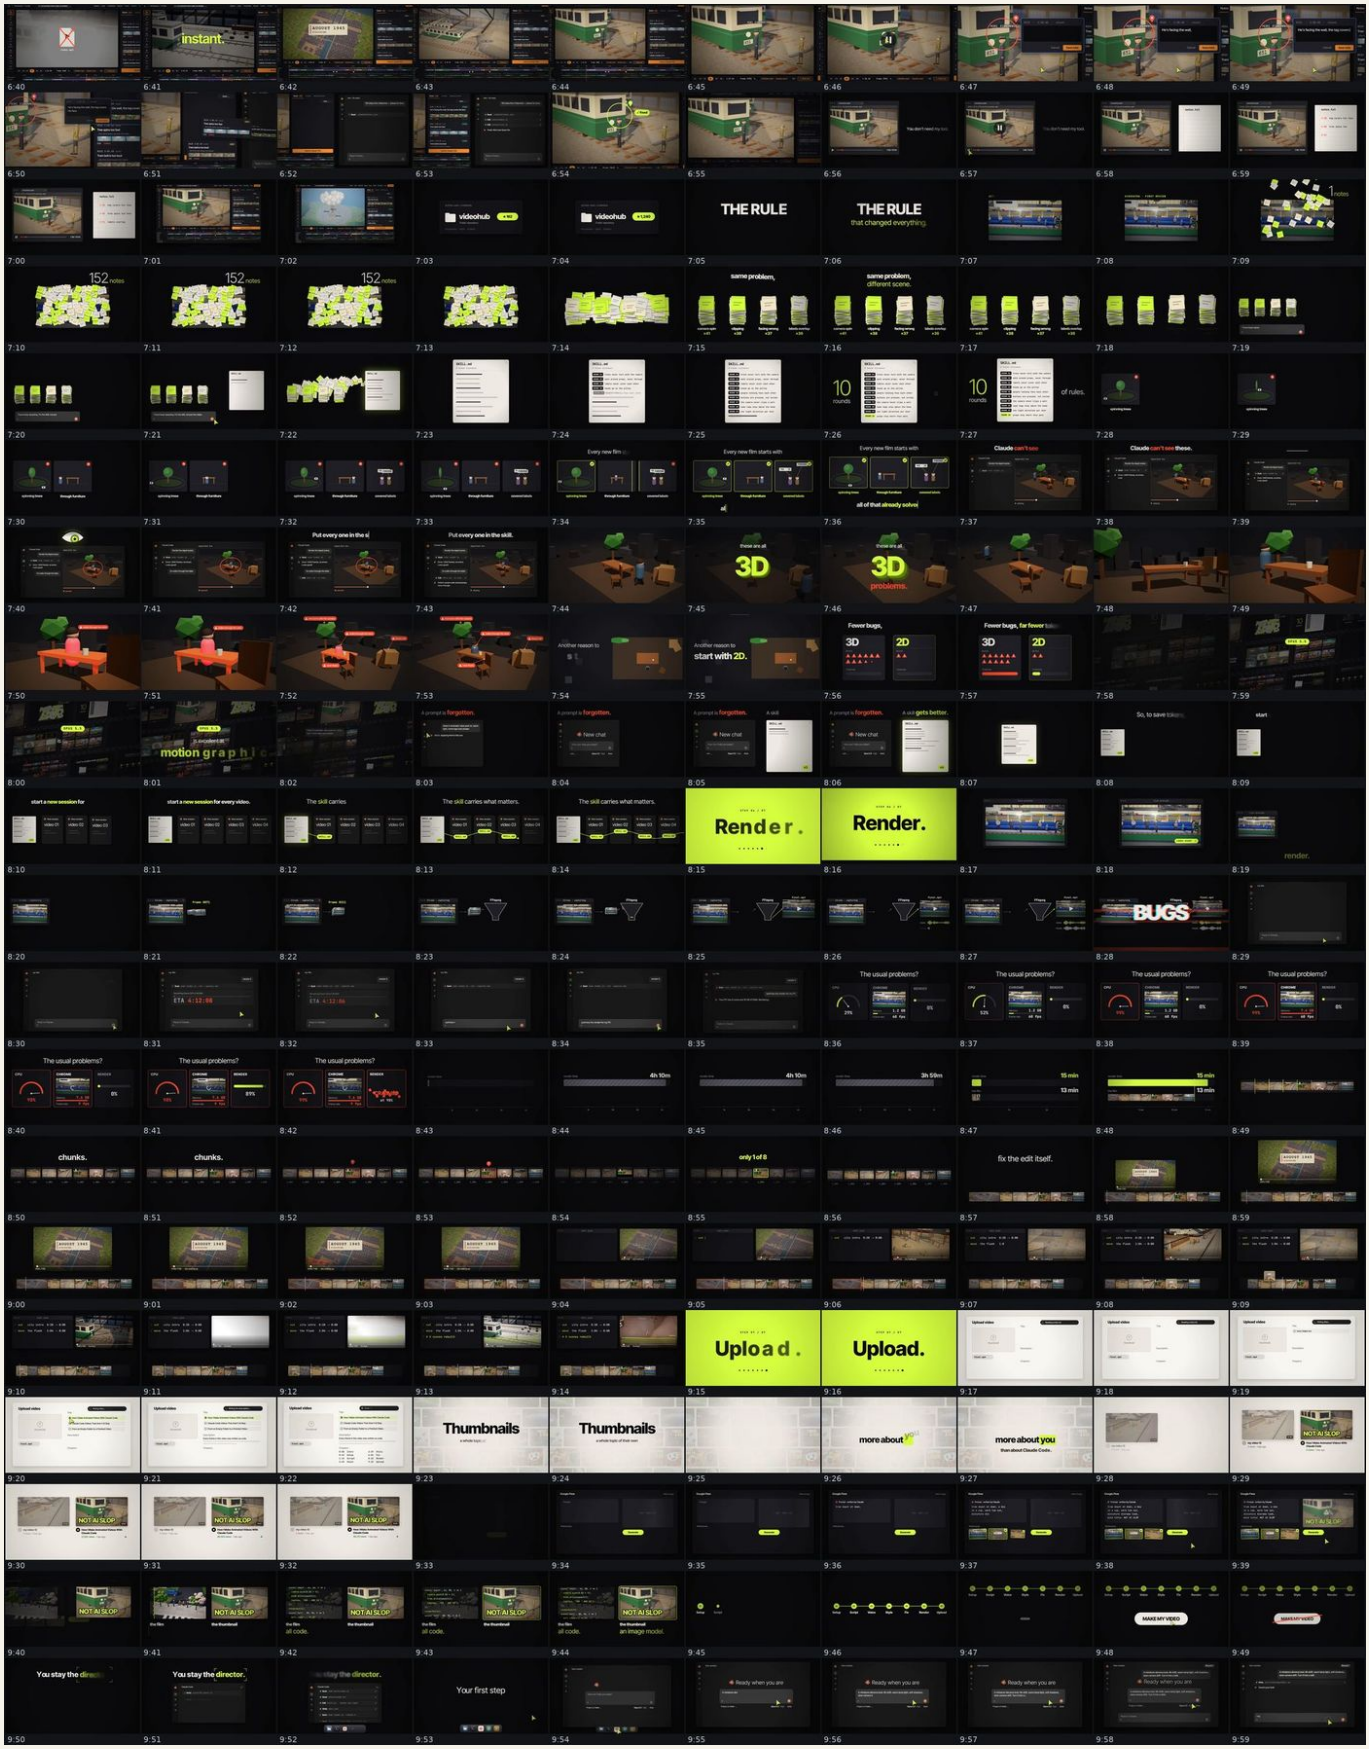

Frame 1 detik, kiri→kanan, atas→bawah. Dipakai untuk memeriksa shot, bukan sebagai aset produksi.

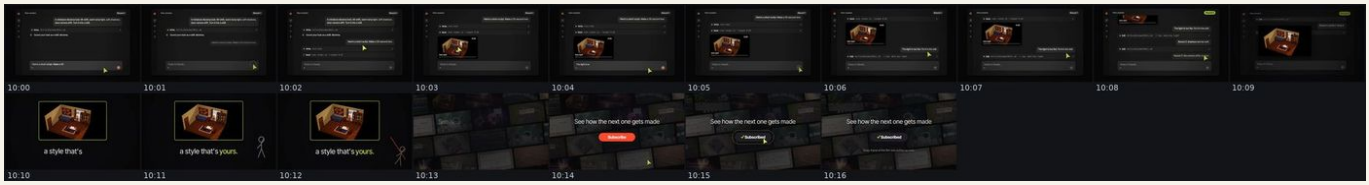

0:00–3:19 — hook, Setup, Script, awal Voice.

3:20–6:39 — Voice, Style, awal Fix.

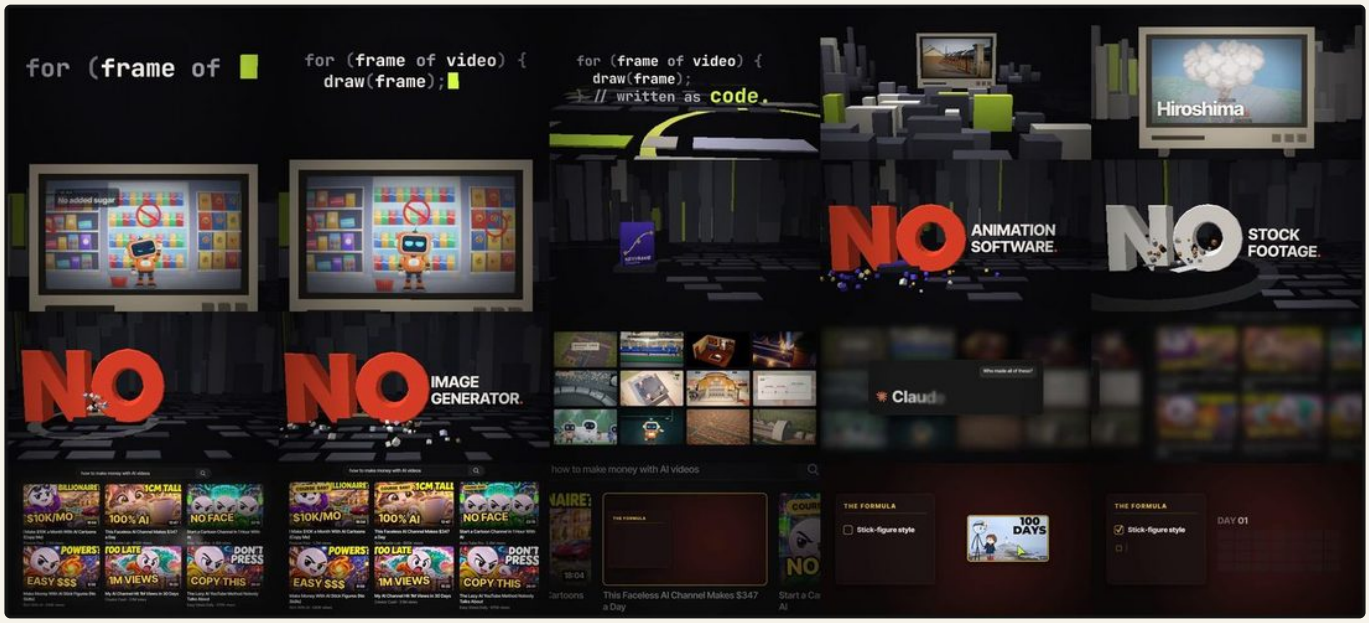

6:40–9:59 — Fix, Render, awal Upload.

10:00–10:17 — closer dan tombol Subscribe.

Enam temuan untuk dibawa ke produksi

1. Video ini karya **Tensaikun**, bukan Zack D. Films: tutorial long-form 16:9, 10:17, faceless.
2. Hook 0–3 detik bekerja karena **bukti dulu** (tipografi kode + kursor lime), bukan intro merek atau janji kosong.
3. DNA yang bisa dipinjam: **gaya dalam angka (skill)**, review sebelum boros render/kredit, perbaiki sistem jika catatan berulang, mulai sederhana (2D), pindahkan momen terkuat ke detik 0, thumbnail dikerjakan terpisah.
4. Jangan meniru palet mereknya (hitam + lime `#D4FF3E` + starburst) atau cyan Zack. Pilih aksen sendiri (contoh paket e-ink: gading + tinta + kobalt).
5. Performa awal kuat secara fakta (41.261 tayang, 1.082 suka, 1.770 pengikut, ±2 hari) — itu bukan jaminan kausal bahwa meniru 1:1 akan meraih angka yang sama.
6. Untuk channel kita yang mengikuti DNA Zack: padatkan cara berpikir ini ke Shorts 9:16; paket Higgsfield orisinil di bab 13 siap dipakai. Salin formula, bukan klip atau naskah.

Contact hook 0:00–0:19 (setiap ~1 detik) — ketukan visual yang rapat di pembuka.

Metodologi. Metadata dari video.info.json, 11 Nov 2026 WIB. Transkrip auto-sub en-orig, WPM = 1952 / (617,163/60). Frame 617 × 1 dtk + kunci 1280px, semua deskripsi merujuk gambar yang dilihat. Palet PIL. Audio ebur128 / volumedetect / silencedetect. Pembanding Zack: DNA_ZacD_FINAL.md. Tidak ada akses analitik YouTube, tidak ada identifikasi lagu, tidak ada klaim "cara ini pasti viral." Unduhan: percobaan 1 gagal 429 pada sub id; percobaan 2 berhasil tanpa cookie.
